Parakstu izveides un validcijas servisa API prskats

Signature creation and validation service (SignAPI) hosts:

Environment	Host <SignAPI_base_url>
Test	signapi-prep.eparaksts.lv
Production	signapi.eparaksts.lv

Description

Signature creation and validation service API's (SignAPI) work is based on sessions.

Received session identifier shall be used in all future requests as reference to a specific set of files.

signAPI provides session storage on a perpetual basis and is used as an identifier for a particular file or set of files.

Service providers only need to retrieve the session identifier once and Service provider shall save session identifier with the parameters of a related particular file or set of files.

Session API

Session API URL

/api-session/v1.0/

Operations

Method	Endpoint	Description
GET	start	Data processing session creation
GET	{sessionId}/close	Closing data processing session
